

## Power over Ethernet (PoE) is now part of the Power of LFP

LFP works with leading providers to supply the same world class Lighting Packages for PoE projects that we do for traditionally wired installations. In many cases we can bundle PoE Equipment with associated Lighting Fixtures, simplifying job site logistics for installers. As always, customers have on-line, real-time visibility into order and delivery status for products coming from LFP. Construction scheduled changed? No problem – contact your LFP Project Manager, or log-on and make changes on-line to match the new schedule.

### Meet our PoE partners!

New to PoE? Click [here](#) for some introductory material from Cisco, a leading provider of the very widely used Ethernet technology that is also central to PoE Lighting. Additional details about the components of a PoE Lighting installation are available [here](#).

[Contact us](#) today for information on how to save money and establish the foundation for successful Building Automation by powering your lights with PoE.
